## Individual task: React-Bootstrap Front-End Framework

<https://react-bootstrap.github.io/getting-started/introduction>

Step 1: Install react-bootstrap with the following command.

```
npm install react-bootstrap bootstrap
```

Step 2: React Bootstrap Configuration

In index.js add the following imports:

```
import '../node_modules/react-bootstrap/dist/react-bootstrap';  
import '../node_modules/bootstrap/dist/css/bootstrap.css';
```

Step 3: We can try if the react-bootstrap is configured by adding some buttons and importing them first. See if the buttons are being reflected after running the app.

```
import {Button} from 'react-bootstrap';
```

some type of buttons we can try:

```
<Button variant="primary">Primary</Button>{' '}  
<Button variant="secondary">Secondary</Button>{' '}  
<Button variant="success">Success</Button>{' '}
```

## React Bootstrap Demo:

In this demo I use components of react-bootstrap to build a demo for our NuOrder website Homepage

```
import {Navbar, Container, Card, Nav, NavDropdown, Form, FormControl, Button,  
Row, Col} from 'react-bootstrap';
```

This is how the homepage will look like after using the components mentioned above:
